

Delivers Both Solvent and Water-Based Finishes

The Hawk Flight Speed Applicator glides across the floor as it applies water-based and solvent-based finishes, restorers and disinfectants in a smooth, even coat crystal-clear coat.

The aluminum applicator head - 28", 36" and 48" wide options - delivers solutions to the floor, ahead of the applicator pads at up to 27,500 square feet per hour. The wide head design minimizes row overlaps. The patented, variable flow control pump can reduce finish usage by up to 20%.

No spills, no drips, no baseboard splashes. Even novice users can perform like a pro.

Hawk Engineering

- 12 V battery-powered 70 psi solution pump delivers finishes to the floor through a 28", 36" or 48" aluminum applicator bar
- Patented variable flow control switch and a master on/orr switch is at your finger tips
- The 8" wheels with a magnetic sensor activates pump as you pull the Flight applicator across the floor
- Use a lambs wool applicator with added 3" synthetic yarn for to spread solvent-based finishes. Use a microfiber applicator pad with water-based finishes. (Always check the finish product label for the recommended pad type.)
- Pads easily mount to the applicator bar with harpoon hooks.
- The corrosion-resistant, powder coated frame is 21" wide x 33.5" deep and holds up to (2) 5 gallon pails.
- A pin-locked handle fits the users height, adjusting from 32" to 40" high
- Easy to rinse and clean. Applicator bar and pad disconnects for convenient storage.
